

# Do you have memory problems?

We are looking for people who were referred to this Memory Assessment Service to participate in a questionnaire study about your experiences following assessment at a specialist memory clinic.

We want to understand how assessment at specialist memory clinics may impact the attitudes, views, and lifestyle choices of people who **do not** receive a dementia diagnosis, as this is not known.

**Who?** (1) Aged 50 or over; (2) Were given no diagnosis; or (3) Diagnosed with either: mild cognitive impairment; subjective memory complaints; age related memory loss (but **not** dementia)

**What?** A questionnaire about your attitudes, views, and lifestyle changes following memory assessment at a specialist memory clinic

**When?** Immediately after diagnosis (within 6 weeks), and in one year's time

**How?** You can complete the questionnaire online or by post

## Interested in participating?
